

## BEST BUYS'

**Ammann-Yanmar** is producing its fourth semi-ViO mini-excavator. The SV20 is built on the modular principle that makes it easier for the operator to dismantle and exchange major components. Direct access to the battery and to electrical and hydraulic elements facilitate maintenance and daily operations.

Powered by a Yanmar 3TNV76-PBVA engine and with a transport weight of 2050kg the SV20 mini-excavator is said to combine a compact frame with high performance output. Digging force reaches 1,900 kgf (bucket) and 1,200 kgf (arm).

The SV20 is equipped with a long arm as standard giving a digging depth of 2.48m and dumping height of 4m. A flow sharing load sensing hydraulic circuit allows for high precision device during simultaneous movements.
